Subject:	FW: [EXTERNAL] larger paper in ICX printer

We received the answer from Dominion on the possibility of using larger paper in the ICX so that ICX and regular ballot cards can be the same size.

So if we are planning to try to keep all the cards the same size, we can go anywhere from 8.5x11 to 8.5x14.   This is configurable in the EMS and Travis had mentioned that there is nothing in the certification that rules this out.

Thanks/Lenny

Yes, you can configure the ICX to duplex up to 14" paper; you would set the configuration on the EMS side, and configure electronic ballot configuration.

Let me know if this helps.
